DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-6 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1 recites "having pads" meaning to introduce pads for different parts of the device in numerous occasions. This makes the claim unclear because it is confusing and hard to determine to which pads Applicant is referring to. It is suggested that, for example, in line five of the claim "and having pads" be substituted for *and having first chip pads*.

Also, see that line 10 of the claim recites "having pads". See that both second chip and plate member are disclosed to have pads. The examiner cannot determine whether applicant is defining plate pads or second chip pads. See that this problem occurs throughout the claim in multiple occasions in this and other dependent claims, such as claim 5.

Claim 3: see that "the outside" lacks antecedent basis.

Claim 5 recites, "electrically connecting at least one of said pads of said second semiconductor..." See that the claim has been rendered indefinite for it recites second semiconductor pads connected to second semiconductor pads.

Claim 5 also recites "to said pads of said plate member and members electrically connecting..." The claim introduces members twice. It is unclear if Applicant refers to the same or to different members.

Also regarding claims 3 and 5 above, the claims have not been rejected over the prior art because, in light of the 35 U.S.C. 112 rejections supra, there is a great deal of confusion and uncertainty as to the proper interpretation of the limitations of the claims; hence, it would not be proper to reject the claims on the basis of prior art. As stated in *In re Steele*, 305 F.2d 859, 134 USPQ 292 (CCPA 1962), a rejection should not be based on considerable speculation about the meaning of terms employed in a claim or assumptions that must be made as to the scope of the claims. See also MPEP 2173.06.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in-

- (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or
- (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

Claims 1, 2, 4 and 6 are rejected under 35 U.S.C. 102(e) as being anticipated by Liu (US 6316727).

Liu discloses a substrate 236 having pads (inherently present, connected to 234); a first semiconductor chip 210 mounted on said substrate and having pads 214; a plate member 202 arranged on said first chip and having an end at an inward position of said first semiconductor chip from the pads; a second chip 222 arranged on said plate and having pads 223; a structure 232 electrically connecting said pads of the first chip and the pads of the second chip to said pads of the substrate; and a seal member 230 sealing said first chip and said second chip.

Liu also discloses:

- Said structure electrically connecting the pads to the substrate comprising wires 225.
- Said plate member 202 comprises laminated layers 228,218
- Said plate having a first portion covered by first and second chips, and a second portion protruding from layers 228,218, wherein the second portion is flushed with a surface of the encapsulant 230.
